

=====

Version 0.99 2020-01-13

=====

\* Bugfix:

- \* IGMP was limited to 7 subscription addresses, changed to 8.
- \* Affected version: v0.98.

=====

Version 0.98 2019-10-10

=====

\* Support for DMX input:

- \* Art-Net broadcast.
- \* sACN multicast.

\* More accessible ports configuration:

- \* The port configuration menu can now be accessed by pressing the port selection button twice in quick succession.

=====

Version 0.97 2019-06-07

=====

\* Support for Art-Net 4:

- \* Enabled by default.
- \* Replaces previous "independent universes" feature.
- \* In Art-Net 4 mode, the node does not expose a second virtual network interface.

\* Improved factory presets:

- \* Selection of start universe when loading a factory preset.
- \* User may choose whether he wants to adjust the network settings when loading a factory preset.
- \* Loading a factory preset has fewer side effects.

\* DMX buffers are flushed when protocol changes.

\* Relaxed DMX refresh rate by default.

=====

Version 0.96 2019-05-14

=====

\* Introducing simple user input locking in addition to password locking.

\* Fixed regression with non-zero start code sACN data packets.

=====

Version 0.95 2019-05-02

=====

\* Merging can now be turned off.

\* The refresh rate can now be changed between max. (ca. 44 Hz) and relaxed (ca. 30 Hz).

\* Fixed a merging bug that could leave the device in a state where it was impossible to send channel values to the outputs below a certain minimal level.

\* Reworked DMX generation engine.

\* Firmware version is now reported correctly via Art-Net.

\* Changed RDM buffers to correct size. The buffer size was low before, which could lead to crashes of the device.

=====

Version 0.93 2018-05-17

=====

\* Cleaner initialization.

=====

Version 0.92 2018-05-16

=====

\* Improved Art-Net and sACN network traffic filtering.

\* Optimized RDM table of device memory organization.

\* Changes to memory management.

\* Fix: Display content used to appear shifted occasionally.

\* DMX outputs are now turned off if low supply voltage is detected.

\* Improved displaying of fatal errors.

```
=====
Version 0.91                                                    2017-11-20
=====
```

- \* All RDM UUIDs and MAC addresses are now listed in the device info screen.
- \* Improved display of network address information.
- \* Changed memory management:  
All dynamically allocated memory is now managed by a single heap.

```
=====
Version 0.90                                                    2017-11-07
=====
```

- \* First release.
